

# Indraprastha Heights

## Complete Building Approval & Regulatory Compliance Guide

A practitioner-level, step-by-step regulatory roadmap covering every approval, NOC, compliance obligation, fee, legal provision, and deadline required to build and sell flats in a G+4 residential project at Dasak Shiwar, Nashik Road, Nashik — from raw land to Occupancy Certificate and society formation. Governing law: UDCPR 2020, MahaRERA 2016, MRTTP Act 1966, Maharashtra Co-operative Societies Act 1960, MOFA 1963.

OWNER

Mr. Dyaneshwar Satbhai

PROJECT

Indraprastha Heights

PLOT

No. 7B, SR No. 56, Dasak Shiwar

AUTHORITY

Nashik Municipal Corporation (NMC)

BUILDING

G+4, 29,100 sq ft saleable

FRAMEWORK

UDCPR 2020 + MahaRERA

WEST ROAD

9.00m Proposed

EAST ROAD

6m Existing → 9m Proposed

PREPARED

June 2026

# Table of Contents

All sections are sequentially ordered. Stages 1–3 can be run in parallel from Day 1.

## PART A — PRE-APPLICATION

### 1 Land Title & Ownership Verification

- 1.1 How to Read a 7/12 Satbara Extract
- 1.2 Property Card (City Survey Record)
- 1.3 30-Year Title Search — What to Look For
- 1.4 NA Order — Complete Process & Fee Calculation
- 1.5 Index II & Encumbrance Certificate

### 2 Regulatory Framework & FSI Calculation

- 2.1 UDCPR 2020 — What It Means for Your Project
- 2.2 FSI Calculation Formula with Your Numbers
- 2.3 TDR — What It Is and How to Load It
- 2.4 Mandatory Building Requirements (Setbacks, Parking, Open Space)

### 3 Technical & Architectural Preparation

- 3.1 Architect Appointment — Credentials & Responsibilities
- 3.2 Structural Engineer & Soil Test
- 3.3 AutoDCR Drawing Set — Complete Requirements

## PART B — NOC COLLECTION

### 4 NOC Collection — All 7 NOCs in Detail

- 4.1 Fire NOC — Documents, System Specs, Inspection
- 4.2 AAI Height Clearance — Online Process
- 4.3–4.7 MSEDCL, Water/Drainage, Tree, Cantonment, MPCB

## PART C — PLAN SANCTION & RERA

### 5 Building Plan Sanction — NMC AutoDCR

- 5.1–5.5 Submission, Fee Formula, Scrutiny, Objections, Sanction Letter

### 6 MahaRERA Registration — Complete Process

- 6.1–6.6 Documents, Carpet Area Rules, Escrow Account, Agreement for Sale, Penalties

## PART D — CONSTRUCTION

### 7 Commencement Certificate

### 8 Construction Stage Compliance

### 9 Occupancy Certificate — Process & Documents

## PART E — FINANCIAL & LEGAL COMPLIANCE

### 10 GST, Stamp Duty, TDS — Buyer & Seller Obligations

### 11 Labour Law Compliance — BOCW, ESIC, PF

**12** Bank Loan Approval for Your Project

**13** PMAY Subsidy Linkage for Buyers

**PART F — POST-CONSTRUCTION**

**14** Co-operative Housing Society Formation

**15** Conveyance of Land to Society

**16** Master Timeline & Key Contacts

1

Land Title & Ownership Verification

Do every item here before spending money on drawings or NOCs

1.1 — How to Read a 7/12 Satbara Extract

The 7/12 (Satbara Utara) is the primary land record. It has two parts: Form 7 (rights of ownership) and Form 12 (cultivation/use). Every column has significance for your project.

| Column on 7/12               | What to Check                                                                        | Red Flag                                                                  |
|------------------------------|--------------------------------------------------------------------------------------|---------------------------------------------------------------------------|
| Survey / Gat Number          | Must match SR No. 56 exactly                                                         | Mismatch = wrong land record                                              |
| Owner Name (Column 1)        | Must read Mr. Dyaneshwar Satbhai as sole/joint owner                                 | Another name = title dispute risk                                         |
| Area (Column 3)              | Area in hectares — convert: 1 hectare = 10,000 sqm. Verify matches plot 37.15×29.38m | Area mismatch = survey error                                              |
| Land Class (Column 2)        | Should say "Nivasgriha" (residential/NA) or "Jirayat" (agricultural)                 | If agricultural — NA order needed before proceeding                       |
| Rights of Others (Etar Hakk) | Must be blank or "Nil"                                                               | Any entry = third-party rights exist — investigate before buying/building |
| Khata / Possession           | Confirms who is in physical possession                                               | Different from owner name = encroachment or tenancy issue                 |
| Crop Details (Form 12)       | For NA land: should show no active cultivation                                       | Active crop = agricultural use = may complicate NA process                |
| Liabilities (Bojapatra)      | Check for mortgages, govt dues, court attachments                                    | Any entry = land is encumbered — clear before proceeding                  |

**Critical:** Get a **certified** copy of 7/12 from the Talathi office — not just an online print. The certified copy carries official stamp and is the only version accepted by NMC, courts, and banks.

STEP 1.1

Obtain Certified 7/12 Extract

Visit Talathi office, Nashik Road circle OR use MahaBhulekh portal (bhulekh.mahabhumi.gov.in) for digital signed copy under DigiLocker. For NMC submission, certified physical copy is preferred.

Talathi Office, Nashik Road OR bhulekh.mahabhumi.gov.in

🕒 1–3 days

₹15–50

1.2 — Property Card (City Survey Record)

STEP 1.2

City Survey Property Card

For urban plots within NMC limits, the Property Card (also called Milkat Patrak or Pradhan Card) is the urban equivalent of 7/12. It records the plot measurements, ownership, and mutation history within the municipal area. AutoDCR requires the City Survey number to be quoted in drawings. Verify:

- City Survey number matches your documents
- Plot dimensions and area align with your floor plan (37.15m × 29.38m)
- Owner name matches ownership chain
- No pending mutation or dispute noted

### 1.3 — 30-Year Title Search Report

#### STEP 1.3

##### Title Search by Advocate — What It Must Cover

Appoint an advocate experienced in Nashik property transactions. The search report must cover:

- **All sale deeds / conveyance deeds** for this plot registered in the last 30 years at Sub-Registrar office
- **Mortgage or charge documents** (equitable, legal, or registered)
- **Court orders / attachments** — civil court, revenue court, DRT
- **Government acquisition notifications** — check if plot falls in any road widening, metro, or acquisition scheme
- **Power of Attorney transactions** — must be verified as genuine
- **Probate / succession documents** if any title transfer was through inheritance

The advocate issues a signed Title Search Report stating the title is clear and marketable. Banks (HDFC, SBI etc.) will do their own title search — your search should reach the same conclusion.

**Sub-Registrar Office records + District Court records**

🕒 10–20 days

₹8,000–18,000 advocate fees

### 1.4 — NA Order (Non-Agricultural Permission)

**Check First:** If your 7/12 shows the land is already classified as NA/residential/nivasgriha within NMC limits, skip this step. If it shows Jirayat (agricultural) or any agricultural class, this step is mandatory and is your longest lead-time item.

#### STEP 1.4

##### NA Order — Complete Application Process

**Applying authority:** Sub-Divisional Officer (SDO), Nashik

##### Documents to submit:

- Application on plain paper (or prescribed form from SDO office) addressed to SDO, Nashik
- Certified 7/12 extract (not older than 3 months)
- Certified Property Card
- Ownership proof (sale deed / gift deed / inheritance documents)
- Site plan showing plot with measurements and surrounding roads
- NOC from Gram Panchayat (if applicable) — for land on municipal fringe
- Affidavit on ₹100 stamp paper stating the land is not used for agriculture and proposed use is residential
- Challan for application fee (varies — currently approx ₹500–2,000 application fee)

##### Process after submission:

1. SDO scrutinizes documents and issues a notice
2. Physical inspection by Circle Inspector / Talathi
3. Objections (if any) from neighboring plot owners — notice period of 15 days
4. SDO forwards recommendation to District Collector
5. District Collector's office processes and issues NA order with premium demand notice
6. Pay NA premium within the time specified (usually 30–60 days)
7. NA Order issued after payment — 7/12 updated to reflect NA status

##### NA PREMIUM CALCULATION FORMULA

**NA Premium = Plot Area (sqm) × Ready Reckoner Rate for NA Land × Applicable %**

Example: 1,090 sqm × ₹4,000/sqm (RR rate) × 10% = ₹4.36 Lakhs (approximate)

Note: Actual RR rate and percentage varies — get exact figure from SDO office at time of application.

**SDO Office, Nashik**

🕒 2–5 months

**NA Premium (calculated above) + ₹5,000–10,000 advocate/agent fees**

STEP 1.5

Index II & Encumbrance Search

Index II is the certified record of all documents registered at the Sub-Registrar's office linked to your survey number. Obtain for the last 30 years. Cross-reference with title search report — any document in Index II must appear in the title chain the advocate has traced. Unexplained documents = title defect.

Sub-Registrar Office, Nashik Road    ⌚ 1–5 days    ₹200–1,000

2

Regulatory Framework & FSI Calculation

UDCPR 2020 — binding rules for your project

2.1 — UDCPR 2020 Overview

The **Unified Development Control and Promotion Regulations (UDCPR) 2020**, notified by the Maharashtra government on 5th December 2020, replaced all previous DCRs for municipal corporations (except Mumbai). It is the single binding regulation governing building design, FSI, setbacks, and use in Nashik. Your architect must work within UDCPR 2020 — not any older Nashik DCR.

**Important:** Verify that your plot falls within NMC limits and not in a Nashik Rural or Nashik Planning Authority zone. The governing regulation differs — if in doubt, check the Development Plan of Nashik (available at NMC office) and verify the zone: Residential Zone (R1 or R2), which determines permitted uses and FSI.

2.2 — FSI Calculation for Your Project

Your Project FSI Numbers

- Plot area: 37.15m × 29.38m = ~1,091 sqm (verify with City Survey record)
- Basic FSI for 9m road (UDCPR 2020 Table): 1.50
- Basic permissible built-up area: 1,091 × 1.5 = 1,636 sqm (17,609 sqft)
- Your saleable area: 29,100 sqft = 2,703 sqm
- Gap between basic FSI and your plan: 1,067 sqm (11,491 sqft)
- This gap must be covered by TDR or Premium FSI — confirm with your architect immediately

FSI CALCULATION — STEP BY STEP

Total Permissible BUA = Plot Area × (Basic FSI + TDR FSI + Premium FSI)

Basic FSI = 1.50 (9m road) | Max TDR = up to 0.50 additional | Premium FSI = up to 0.50 on payment

Your target: 2,703 sqm / 1,091 sqm = FSI of 2.48 required

Strategy: Basic 1.5 + TDR 0.5 + Premium 0.48 = achievable but confirm with NMC

| FSI Type                              | How to Get It                                                                                                                                                              | Cost                                                          | Max Limit                  |
|---------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------|----------------------------|
| Basic FSI                             | Automatic — paid through development charges                                                                                                                               | Included in dev charges                                       | 1.50 (9m road)             |
| TDR (Transferable Development Rights) | Buy TDR certificates from government or open market in Nashik. TDR is issued against land surrendered for public purposes (roads, reservations). Purchase from TDR market. | Market rate — currently ₹800–1,500/sqm of plot area in Nashik | +0.50 additional FSI       |
| Premium FSI                           | Pay premium to NMC. Apply along with building plan submission. NMC calculates premium based on Ready Reckoner rate.                                                        | Premium = 35% of RR rate × additional area                    | +0.50 additional FSI       |
| Fungible FSI                          | Additional FSI for balconies, service areas, flower beds. Pay 60% of RR rate for residential.                                                                              | 60% of RR rate × fungible area                                | 35% of basic built-up area |

2.3 — TDR — What to Know Before Buying

TDR GUIDANCE

How TDR Works Practically in Nashik

- TDR certificates are issued by NMC/MIDC/government to landowners who surrender land for roads, amenities, reservations
- These certificates are tradeable — you buy them from existing TDR holders through a market
- In Nashik, TDR market is active — your architect or a local property consultant can identify sellers

- TDR must be of the **same zone or receiving zone** as your plot — residential TDR for residential project
- TDR is registered via an agreement of TDR utilization submitted with your building plan
- The amount of TDR you can use: up to 50% of basic FSI (i.e., 0.50 additional FSI for a basic FSI of 1.50)
- Always have your advocate verify TDR certificates before purchase — fake TDR is a known fraud

## 2.4 — Mandatory Regulation Summary (UDCPR 2020)

| Regulation           | UDCPR 2020 Rule                                                                        | Your Project Implication                          |
|----------------------|----------------------------------------------------------------------------------------|---------------------------------------------------|
| Front setback        | Min 3m from road boundary for up to 15m height; 4.5m for heights above                 | 3–4.5m from west (9m road) boundary               |
| Side setback         | Min 1.5m for G+1/2; increases with height. G+4: check with architect per UDCPR Table 6 | Approx 2.5–3m each side                           |
| Rear setback         | Min 3m from rear boundary                                                              | 3m from southern boundary                         |
| Ground coverage      | Max 45% of plot area for residential group housing                                     | Max 491 sqm footprint                             |
| Open space           | Min 10–15% of plot for recreational open space (group housing)                         | Min 109–164 sqm must remain open                  |
| Parking (ECS)        | 1 ECS per unit for 2BHK+. ECS = Equivalent Car Space (23 sqm)                          | If 20 flats: 20 ECS = 460 sqm parking minimum     |
| Staircase width      | Min 1.2m clear for residential; fire escape stair min 1.0m                             | Both staircases must comply                       |
| Corridor width       | Min 1.2m clear passage in common areas                                                 | Central passage shown at 8ft = 2.4m — compliant   |
| Lift provision       | Mandatory for buildings above G+3 (i.e., 4 floors and above)                           | Your plan has lift — confirmed compliant          |
| Rainwater harvesting | Mandatory for all new buildings in NMC                                                 | Must show RWH pit in drawings                     |
| Solar water heating  | Mandatory for residential buildings with more than 10 flats                            | Show solar provision on terrace plan              |
| Ventilation          | Every habitable room: window area min 1/10th of floor area                             | Check all bedroom and living room windows in plan |
| Balcony projection   | Max 1.2m projection allowed — counted in fungible FSI                                  | Verify balcony depths in your plan against this   |

3

Technical & Architectural Preparation

Start simultaneously with Stage 1 — do not wait

3.1 — Architect Appointment

STEP 3.1

Confirm Guru Buildcon's Credentials

Your appointed planner is Guru Buildcon, Nashik Road. Before proceeding with any drawing submission, verify the following:

- **Council of Architecture (CoA) registration number** — mandatory. All drawings must carry this number. Verify at [coa.gov.in](http://coa.gov.in)
- **AutoDCR software proficiency** — confirm they have submitted projects on NMC's AutoDCR system before and are familiar with the layer naming conventions and file format requirements
- **UDCPR 2020 familiarity** — the regulation is relatively recent; confirm they are working from UDCPR 2020 and not the older Nashik DCR
- **Professional Indemnity Insurance** — not legally required but recommended for a project of this size

Execute a formal **Appointment Letter / Agreement** with Guru Buildcon specifying: scope of work, fees, milestones, timeline, and liability for regulatory compliance of drawings.

3.2 — Structural Engineer & Soil Investigation

STEP 3.2A

Structural Engineer Appointment

The structural engineer is legally separate from the architect. Their role: design foundation, columns, beams, slabs, retaining walls, and provide stability certificate at each construction stage. Requirements:

- Must hold a degree in Civil/Structural Engineering from a recognized university
- Must be licensed/empaneled with NMC as a Licensed Technical Person (LTP) under MRTTP Act
- Signs and stamps all structural drawings — this creates personal legal liability

STEP 3.2B

Soil Investigation (Geotechnical Survey)

The soil test determines the safe bearing capacity of the ground and the appropriate foundation system. For a G+4 building on a plot in Dasak Shiwar (which may have varied soil conditions near the road corridor), this is critical. The report must include:

- **Bore log data:** depth of drilling, soil type at each layer (sandy, clayey, rocky, filled)
- **SPT values (N-values):** Standard Penetration Test at every 1.5m depth — determines soil strength
- **Safe Bearing Capacity (SBC):** in kN/sqm — the structural engineer uses this to design footings
- **Water table depth:** determines whether you need waterproofing in basement/plinth
- **Foundation recommendation:** isolated footings, combined footings, raft, or pile (piles needed if SBC is low)

Minimum 3–4 bore holes for a plot of this size, spread across the footprint. Report must be signed by a qualified geotechnical engineer.

Hire a geotechnical lab in Nashik — approx ₹15,000–45,000 ⌚ 10–14 days

3.3 — AutoDCR Drawing Set — Complete Requirements

NMC processes building permissions through **AutoDCR** software which automatically checks drawings against UDCPR 2020 regulations. All drawings must be prepared in AutoCAD DXF/DWG format following NMC's prescribed layer naming and scale conventions. Manual/hand drawings are not accepted.

| Drawing                 | Scale            | What It Must Show                                                             |
|-------------------------|------------------|-------------------------------------------------------------------------------|
| Key Plan / Location Map | 1:2000 or 1:1000 | Location of plot within Nashik, surrounding roads, landmarks, North direction |

| Drawing                         | Scale          | What It Must Show                                                                                                                                                            |
|---------------------------------|----------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Site Plan                       | 1:500 or 1:200 | Exact plot boundaries with measurements, road widths (9m west, 6m east), setbacks marked, building footprint, compound wall, gate, parking, open space, rainwater pit, trees |
| Ground Floor Plan               | 1:100          | All rooms with dimensions, door/window positions, parking, lobby, lift, staircase, accessibility ramp, setbacks                                                              |
| Typical Floor Plan (each floor) | 1:100          | All units, room dimensions, balconies, utility areas, lift, staircase, corridor widths                                                                                       |
| Terrace / Roof Plan             | 1:100          | Staircase head room, lift machine room, water tanks, solar panel area, parapet heights                                                                                       |
| All 4 Elevations                | 1:100          | North, South, East, West faces showing windows, balconies, material finish, parapet, building height dimensions                                                              |
| 2 Sections                      | 1:100          | Section through staircase/lift core (longitudinal) and through a typical unit (cross-section). Show floor heights, headroom, slab thickness                                  |
| Parking Plan                    | 1:100 or 1:200 | Each parking stall (2.5m × 5m standard), drive aisles (min 6m width), ECS count, ramp gradient if stilt parking                                                              |
| Drainage & Plumbing             | 1:100          | Soil pipe, waste pipe, drain routing, septic/sewer connection point, grease trap (if applicable)                                                                             |
| Rainwater Harvesting            | 1:100          | Roof area draining to RWH pit, pit dimensions (min as per NMC norms based on plot area), percolation pit or storage tank                                                     |
| Solar Water Heating             | Schematic      | Number of solar collectors on terrace, storage tank capacity, pipe routing to flats — min 100 LPD per flat                                                                   |
| Fire Protection Plan            | 1:100          | Wet riser locations, fire extinguisher positions, hose reel cabinet locations, escape routes marked, fire door positions, terrace water storage tank                         |

**AutoDCR Auto-Checks:** The system automatically verifies setbacks from plot boundaries, FSI consumed vs permitted, ground coverage, parking count, staircase width, lift provision, and corridor widths. Any non-compliance shows as a red flag on screen and blocks submission. Your architect must resolve all auto-flags before final submission.

4

## NOC Collection — All 7 NOCs Detailed

Apply for all on the same day — do not sequence them

**Most Common Project Delay:** Builders apply NOCs one by one. Each takes 30–60 days. Applied sequentially, this wastes 6–12 months. Apply all simultaneously from Day 1 of drawing preparation.

### NOC 4.1 — Fire Department NOC (Mandatory — G+4)

#### NOC 4.1 — FIRE DEPARTMENT, NMC

##### Fire NOC — Documents, System Specs, Inspection Process

###### Documents to submit:

- Application letter addressed to Chief Fire Officer, NMC
- Fire protection plan (from your AutoDCR drawing set)
- Structural drawings showing staircase and escape route widths
- Specifications of fire fighting equipment proposed

###### Fire system specifications required for G+4 residential (Maharashtra Fire Prevention & Life Safety Measures Act 2006):

- **Wet Riser System:** 100mm (4") diameter GI pipe running vertically through all floors. Landing valve on each floor. Siamese connection on ground floor for fire brigade connection. Pressurized via fire pump.
- **Terrace / Overhead Water Tank:** Min 10,000 litres dedicated for fire fighting (separate from domestic supply). Clearly marked.
- **Fire Pump:** Electric pump (main) + diesel pump (standby) of min 900 LPM capacity at 3.5 kg/cm<sup>2</sup> pressure. Pump room at ground level with 24-hour access.
- **Hose Reel Cabinet:** On each floor landing — 20m hose + nozzle. Cabinet in break-glass enclosure.
- **Portable Fire Extinguishers:** ABC dry powder type, 5kg minimum. One per 150 sqm of floor area. Also CO2 extinguishers in electrical rooms.
- **Smoke Detectors:** In lift lobby, common passages, and electrical rooms. Interconnected alarm system.
- **Emergency Exit Signage:** Illuminated green "EXIT" signs above all escape routes. Backup battery operated.
- **Fire Escape Staircase:** Min 1.0m wide, no combustible material stored, self-closing fire door at each floor landing, leads directly to open ground level.
- **Fire Doors:** At lift lobby on each floor — min 60-minute fire rating (FD 60).

**Inspection process:** After drawings are approved, fire officer conducts a site inspection during construction to verify systems are being installed per approved drawings. Final inspection before OC.

**Chief Fire Officer, NMC, Nashik** ☎ 30–60 days for drawing approval; final NOC at completion

**Nominal govt fee + installation cost ₹3–8 Lakhs**

### NOC 4.2 — AAI Height Clearance

#### NOC 4.2 — AIRPORT AUTHORITY OF INDIA

##### Height Clearance — Online Process via NOCAS

Nashik has Ozar Airport (ICAO: VANR) which creates height restriction funnels over surrounding areas. Your building must fall within permitted height limits.

###### How to apply:

1. Go to **nocas.aai.aero** — Airport NOC Automation System
2. Register as applicant (individual/company)
3. Create new application: select "Nashik / Ozar Airport" from dropdown
4. Enter: GPS coordinates of your plot (latitude/longitude — get from Google Maps), proposed building height above ground level (in metres), purpose (residential)
5. Pay online application fee (₹500–2,000)

6. System auto-computes whether your structure falls within restricted zone

7. NOC issued digitally if compliant; if within restricted zone, AAI may issue conditional NOC specifying max height permitted

**What to do if height is restricted:** AAI may specify a lower maximum height. Your architect must adjust building design if required. For a G+4 building (~15m height), clearance is usually granted as Ozar Airport is approx 25km from Nashik Road area — but confirm before proceeding.

**Online:** [nocas.aai.aero](https://nocas.aai.aero)

🕒 15–30 days

₹500–2,000 application fee

## NOC 4.3 — MSEDCL Electrical NOC

### NOC 4.3

#### Maharashtra State Electricity Distribution Co. Ltd — Electrical Connection NOC

Apply to MSEDCL Nashik Division (Nashik Road sub-division) for:

- Electrical service connection NOC confirming grid capacity exists for your project
- Submit: site plan, building layout, proposed load calculation (number of flats × estimated load per flat), proposed transformer capacity
- For a 20-flat G+4 building: estimate 3–5 kW per flat + common area 5 kW = 65–105 kW total connected load
- MSEDCL will specify the transformer requirement and overhead line routing

**MSEDCL Sub-Division Office, Nashik Road**

🕒 15–30 days

## NOC 4.4 — NMC Water & Drainage NOC

### NOC 4.4

#### Water Connection & Drainage Connection NOC

- Apply to NMC Water Department for water supply connection NOC — they will specify the pipe connection point from the NMC water main on your road
- Apply to NMC for drainage connection — must connect building's sewage to NMC's underground drainage system. If municipal drain is not available on your road, you may need to provide an approved septic tank + soak pit system as per IS 2470
- Submit drainage plan showing: soil pipe sizes, manholes, inspection chambers, connection point to NMC drain
- Water connection deposit: paid to NMC at time of connection (after OC)

**NMC Water Supply & Sewerage Department, Nashik Road Ward**

🕒 15–30 days

## NOCs 4.5, 4.6, 4.7

### NOC 4.5 — TREE AUTHORITY (IF APPLICABLE)

#### NMC Tree Authority

If any trees exist on the plot, apply to NMC's Tree Authority for permission to cut or transplant. Carry out a tree survey first — count, measure girth, identify species. Trees with girth >100mm require formal permission. Submit: tree survey report, site plan, reason for removal, undertaking to plant 3 replacement trees per tree removed at NMC-approved location.

If no trees exist: submit a self-declaration signed by owner and architect stating no trees on plot — include a site photograph.

### NOC 4.6 — CANTONMENT AUTHORITY (CHECK IF APPLICABLE)

#### Deolali/Nashik Road Cantonment NOC

Nashik Road Cantonment and Deolali Cantonment are in the vicinity. Plots that fall within the cantonment zone or within a defined buffer (typically 500m from cantonment boundary) may require NOC from the Station Commander. Your advocate must check the cantonment boundary map against your plot's GPS coordinates. If required: submit building plan, plot ownership proof, and application to Station Commander/Cantonment Board.

### NOC 4.7 — MPCB ENVIRONMENTAL CLEARANCE

#### Maharashtra Pollution Control Board

Construction projects above a certain built-up area threshold require environmental clearance under EIA (Environmental Impact Assessment) Notification. For residential buildings below 20,000 sqm built-up area, a simpler prior environmental permission (PEP) or self-declaration

under MPCB may apply. Your architect must confirm the threshold applicability. Apply online at [environs.maharashtra.gov.in](https://environs.maharashtra.gov.in). Submit: project details, estimated construction waste management plan, dust mitigation plan.

[environs.maharashtra.gov.in](https://environs.maharashtra.gov.in) ⓘ 30–60 days

5

# Building Plan Sanction — NMC AutoDCR

Central approval from which everything else flows

STEP 5.1 — ONLINE SUBMISSION VIA AUTODCR

How NMC AutoDCR Submission Works

NMC processes all building permission applications through AutoDCR (Automated Development Control Regulations) software by Softtech Engineers.

- 1. Architect registration:** Guru Buildcon must be registered on NMC's AutoDCR portal with their CoA number
- 2. File preparation:** All drawings in DXF format with prescribed layer names (e.g., layer "SETBACK" for setback lines, "PLOT" for plot boundary). Wrong layers = auto-rejection
- 3. Upload drawings:** Site plan, all floor plans, elevations, sections uploaded individually
- 4. Auto-compliance check:** AutoDCR instantly checks FSI, ground coverage, setbacks, parking count, staircase width against UDCPR 2020. System flags all violations in a report
- 5. Fix errors:** Architect corrects any AutoDCR flags, resubmits
- 6. Document upload:** Scanned copies of all NOCs, ownership documents, soil test report, structural drawings, Architect's undertaking
- 7. Fee payment:** Pay online through NMC portal — calculate fees as below

STEP 5.2 — GOVERNMENT FEE CALCULATION

NMC Building Permission Fee — How It Is Calculated

DEVELOPMENT CHARGES (DC) FORMULA — UDCPR 2020

**DC = Built-up Area (sqm) × DC Rate for Residential (per sqm)**

DC Rate for NMC residential zone: check current NMC schedule (approx ₹350-700/sqm for residential as of 2024-25; rates revised periodically)

**Infrastructure Charges = Built-up Area × Infrastructure Rate (approx ₹200-400/sqm)**

**Premium FSI Charges = Additional FSI area × 35% of RR Rate**

**Estimated Total: ₹18-45 Lakhs for 2,700 sqm – get exact calculation from NMC before budgeting**

| Fee Component            | Basis                                | Approximate Rate                                 |
|--------------------------|--------------------------------------|--------------------------------------------------|
| Development Charges      | Per sqm of total built-up area       | ₹350–700/sqm                                     |
| Infrastructure Charges   | Per sqm of total built-up area       | ₹200–400/sqm                                     |
| Premium FSI Charges      | Additional FSI area × 35% of RR rate | Calculated per RR rate                           |
| Scrutiny / Plan Fee      | Based on built-up area               | ₹20,000–80,000                                   |
| Water Betterment Charges | Per flat / connection                | ₹5,000–20,000 per flat                           |
| Labour Welfare Cess      | 1% of total construction cost        | Paid quarterly during construction to BOCW Board |
| TDR Purchase             | Market rate                          | ₹800–1,500 per sqm of plot area                  |

STEP 5.3 — NMC TECHNICAL SCRUTINY

## What Happens During NMC Review

After online submission and fee payment, NMC's Town Planning department assigns a technical officer who reviews the drawings manually for:

- Conformity with the Nashik Development Plan zone classification
- Correct application of UDCPR 2020 regulations relevant to your specific zone
- Accuracy of FSI calculation including TDR and premium FSI claims
- Validity of all NOCs submitted
- Structural drawing adequacy

If the officer raises written objections (Sakshep Patrak), your architect must respond within the time stipulated (usually 30 days) with revised drawings or written justification. The file gets rejected if you miss the response deadline — you would need to resubmit from scratch.

**Common Objections to Prepare For:** FSI exceeds limit without adequate TDR proof; parking count short by 1–2 ECS; fire staircase width insufficient; rainwater harvesting plan missing; solar provision not shown; setback measurement error.

### STEP 5.4 — BUILDING PLAN SANCTION LETTER

#### What the Sanction Letter Contains

Once all objections are cleared and fees paid, NMC issues the formal Building Plan Sanction letter. It specifies:

- Approved FSI and built-up area
- Number of floors permitted
- Conditions of sanction (e.g., fire NOC final at completion, OC before possession)
- Validity period — usually 5 years from sanction date; must apply for CC within this period
- Any deviations that were conditionally approved subject to payment

Get 5 certified copies of the sanction letter. You will need them for: MahaRERA, bank project approval, Commencement Certificate, MSEDCL connection, and buyer documentation.

## 6

## MahaRERA Registration

Mandatory before any sale, marketing, booking, or advance money

**Legal Provision:** Section 3 of the Real Estate (Regulation & Development) Act, 2016 prohibits any promoter from advertising, marketing, booking, selling, or offering for sale any real estate project without first registering with the Real Estate Regulatory Authority. Violation: fine up to 10% of project cost. Repeat violation: imprisonment up to 3 years.

### STEP 6.1 — PROMOTER REGISTRATION

#### Register as Promoter on MahaRERA Portal

Portal: [maharera.mahaonline.gov.in](http://maharera.mahaonline.gov.in)

Individual promoter registration requires:

- PAN card of promoter (Mr. Dyaneshwar Satbhai)
- Aadhaar card
- Passport-size photograph
- Address proof
- Bank account details (IFSC, account number)
- If company: Certificate of Incorporation, MOA, AOA, list of directors, DSC of authorized signatory

### STEP 6.2 — PROJECT REGISTRATION (FORM A)

#### Documents Required for Project Registration

- Building Plan Sanction letter from NMC (Stage 5)
- Land title documents — 7/12, property card, title search report
- NA Order (if land was agricultural)
- Architect's certificate confirming sanctioned plan details
- CA (Chartered Accountant) certificate — project cost estimate, financial details, promoter's financial capacity
- Encumbrance certificate
- Details of each unit: type (2BHK/3BHK), carpet area in sqft/sqm, floor number, unit number
- Proposed completion date (be conservative — RERA penalizes delays)
- Details of amenities provided
- Escrow account details (see Step 6.3)

### STEP 6.3 — ESCROW ACCOUNT (70% RULE)

#### Designated Project Bank Account — Mandatory

Under Section 4(2)(l)(D) of RERA 2016, **70% of all amounts realized from buyers must be deposited in a separate designated bank account** and can only be withdrawn in proportion to the percentage of project completion certified by an engineer, architect, and CA.

- Open a separate current account in a scheduled bank specifically for this project — name it "Indraprastha Heights Project Account"
- This account must be disclosed on RERA portal
- Every booking amount, installment, and payment from buyers: 70% must go into this account
- The remaining 30% can be used for land cost, overheads, marketing
- Withdrawals from the 70% account require a certificate from your structural engineer (% completion), architect, and CA
- Bank cannot allow withdrawals without these certificates

**Do not mix project funds with personal account or other projects.** RERA auditors and MahaRERA inspections specifically check this. Violation leads to registration cancellation and refund liability to all buyers.

#### STEP 6.4 — CARPET AREA & PRICING RULES UNDER RERA

##### How to Calculate and Declare Carpet Area

RERA Section 2(k) defines carpet area as: "the net usable floor area of an apartment, excluding the area covered by the external walls, areas under services shafts, exclusive balcony or verandah area and exclusive open terrace area, but includes the area covered by the internal partition walls of the apartment."

###### WHAT IS EXCLUDED FROM CARPET AREA

**External walls + Shared walls + Service shafts + Balconies + Terraces = NOT carpet area**

What is INCLUDED: All internal rooms + internal partition walls + internal bathroom/toilet + internal passages

**You MUST price flats per sqft of carpet area – not super built-up area. Buyers have a legal right to demand carpet area pricing.**

Typically, carpet area = 70–75% of super built-up area. For your plan, if a 2BHK has 850 sqft super built-up, carpet area would be approximately 595–638 sqft. Declare the carpet area accurately in RERA — giving a lower carpet area than actual is prohibited; giving higher is also prohibited.

#### STEP 6.5 — AGREEMENT FOR SALE (AFS) — MANDATORY CLAUSES

##### What Every Agreement for Sale Must Include

Under RERA and Maharashtra MOFA 1963, every agreement for sale of a flat must contain these clauses in prescribed format (MahaRERA has a model AFS format):

- Exact carpet area of the flat being sold
- Price per sqft of carpet area + separately stated common area charges
- Payment schedule linked to construction milestones (not arbitrary demands)
- Proposed date of possession
- Specification of materials — flooring, tiles, fittings, windows (model specifications)
- Penalty clause: if builder delays — interest at SBI MCLR + 2% per month on amount paid
- Buyer's right to cancel and get refund with interest if builder delays by more than agreed period
- RERA registration number of the project
- Clause confirming the promoter will not mortgage the flat after AFS is signed

The AFS must be registered at the Sub-Registrar office. Stamp duty on AFS at time of booking: **0.1% of sale value** (paid at booking). Balance stamp duty on final sale deed: **6% of sale value** (male buyer) or **5%** (female buyer). Registration charge: 1% (max ₹30,000).

#### STEP 6.6 — QUARTERLY MAHARERA UPDATES

##### Ongoing Compliance After RERA Registration

- Upload construction progress photographs every quarter to MahaRERA portal
- Upload financial statements — amount collected from buyers, amount deposited in escrow, amount withdrawn with certification
- Update list of booked units, cancelled units, unsold units
- Annual audit of project accounts by a CA — submit to MahaRERA
- If project is delayed beyond declared completion date: file extension application with MahaRERA with reason (force majeure, government approval delays) — MahaRERA may or may not grant extension

MahaRERA registration fee: based on project area. For projects above 500 sqm: ₹50,000–₹5,00,000 based on area

7

Commencement Certificate (CC)

Legal permission to break ground — do not start before this

STEPS 7.1–7.3

CC Application, Inspection, and Issuance

Apply to NMC Building Department after obtaining building plan sanction (Stage 5) and MahaRERA registration (Stage 6). Submit certified copies of both documents with your CC application form.

NMC's Junior Engineer / Assistant Engineer visits the site to physically verify: plot boundary markers match the approved site plan, no construction started without permission, setback distances are physically marked on site using pegs or lime markings. After verification, CC is issued within 2–4 weeks.

**Post CC obligations:** Display the CC and approved plan prominently on-site at all times (NMC bylaw requirement). A laminated copy in an A1 size frame is standard practice. Visitors, buyers, inspectors — all have the right to see the approved plan on site.

🕒 2–4 weeks

8

Construction Stage Compliance

These checkpoints are legally required — missing them creates OC problems

| Stage                     | What Must Happen                                                                                                                                                                               | Who Issues                               | Consequence of Skipping                  |
|---------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------|------------------------------------------|
| Foundation / Plinth level | Call NMC Junior Engineer for plinth check inspection before raising columns above plinth. Submit Plinth Completion Certificate application.                                                    | NMC JE + Structural Engineer certificate | NMC can stop construction; OC refused    |
| Each floor slab (RCC)     | Structural engineer must visit site, certify slab as per approved structural drawing. Issue Slab Completion Certificate for each floor.                                                        | Licensed Structural Engineer             | No structural certificate = no OC        |
| Lift shaft                | Before constructing lift shaft, submit lift shaft drawings to Lift Inspector of Maharashtra, Office of Director of Industrial Safety & Health (DISH), Maharashtra. Get shaft drawing approval. | Lift Inspector — DISH Maharashtra        | Lift cannot be certified; OC not granted |
| Electrical wiring         | All internal wiring by MSEDCL-licensed electrical contractor. Wiring test certificate from licensed electrical supervisor before energizing.                                                   | Licensed Electrical Supervisor + MSEDCL  | MSEDCL will not give meter connection    |
| Terrace / Parapet         | Parapet height min 1.05m above terrace floor (UDCPR requirement). Structural certificate for roof slab.                                                                                        | Structural Engineer                      | Fire NOC and OC withheld                 |
| Rainwater harvesting      | RWH system must be physically constructed as per approved plan before OC application.                                                                                                          | NMC inspection at OC stage               | OC withheld                              |
| Solar water heating       | Solar collectors installed on terrace, storage tanks, piping connected to flats as per approved plan.                                                                                          | Vendor certificate + NMC inspection      | OC withheld                              |
| Fire systems              | All fire fighting systems (wet riser, pumps, extinguishers, smoke detectors) fully installed and tested before final fire inspection.                                                          | Fire Department Final Inspection         | Final Fire NOC and OC withheld           |
| Quarterly RERA updates    | Upload construction photographs + financial report to MahaRERA portal every quarter.                                                                                                           | Promoter (you)                           | RERA penalty; registration suspension    |

9

Occupancy Certificate (OC)

The single most important document — without OC, nothing is legal

**Legal Position:** Under RERA Section 11(4)(b), a promoter cannot hand over possession of a flat to a buyer without first obtaining OC. Handing over before OC is a criminal offence. Banks will not disburse home loans to buyers without OC. Buyers' advocate will insist on OC before registration of sale deed.

#### STEPS 9.1–9.3

### OC Application — What NMC Inspects

#### Documents to submit with OC application:

- Architect's Completion Certificate (building constructed per sanctioned plan — signed and CoA stamped)
- Structural Engineer's Stability Certificate (building is structurally safe for occupation)
- Fire Department Final NOC (fire systems installed and inspected)
- Lift Inspector's Certificate (lift installed and tested — DISH Maharashtra)
- Rainwater Harvesting Completion Certificate
- Solar Water Heating Installation Certificate
- MSEDCL electrical test certificate
- NMC water and drainage connection confirmation

**NMC Final Inspection:** A team (typically Town Planning Officer + Junior Engineer) visits every floor. They physically measure setbacks, check if the building matches the sanctioned plan, inspect fire exits, check parapet height, inspect parking area, verify lift room, check rainwater harvesting pit. Any deviation from the sanctioned plan is flagged.

**Handling deviations:** Minor deviations (e.g., a room slightly larger than plan) can be regularized by paying a compounding charge to NMC. Major structural deviations (extra floor, different layout) require demolition and reconstruction to match the sanctioned plan — this is why you must build exactly per the approved plan.

🕒 2–4 months from OC application to OC issuance

10

## GST, Stamp Duty & TDS — What You and Your Buyers Must Pay

Non-compliance attracts tax department scrutiny — get a CA involved from Day 1

### GST on Residential Flats

| Situation                                                                                         | GST Rate                    | ITC Available?  |
|---------------------------------------------------------------------------------------------------|-----------------------------|-----------------|
| Sale of under-construction flat (non-affordable housing)                                          | 5% of sale value            | No ITC to buyer |
| Affordable housing (carpet area ≤ 60 sqm in metros; ≤ 90 sqm in non-metros AND price ≤ ₹45 Lakhs) | 1%                          | No ITC          |
| Sale after OC (completed flat)                                                                    | 0% (not a supply under GST) | N/A             |

For your project: 2BHK at ₹36L (carpet area ~700 sqft = 65 sqm) and location in non-metro Nashik → check if price is under ₹45L. If yes, buyers pay **1% GST**. 3BHK at ₹55L will attract **5% GST**. You must register for GST as a promoter and collect and remit GST on all bookings of under-construction units.

### Stamp Duty & Registration — Maharashtra

| Document                            | Stamp Duty                                                   | Registration Charge | Who Pays |
|-------------------------------------|--------------------------------------------------------------|---------------------|----------|
| Agreement for Sale (AFS) at booking | 0.1% of total sale consideration                             | ₹1,000              | Buyer    |
| Final Sale Deed (at possession/OC)  | 6% (male buyer), 5% (female buyer), 4.5% (joint male+female) | 1% (max ₹30,000)    | Buyer    |
| Additional Metro Cess (NMC area)    | 1% additional on sale deed                                   | —                   | Buyer    |

**Practical note for buyers:** Many buyers in Nashik prefer to register only after OC (zero GST, no under-construction risk). This is their right. You should offer to assist buyers with AFS at booking and final registration at OC — have a tie-up with a local Sub-Registrar-appointed document writer.

### TDS on Property Purchase

Under Section 194-IA of the Income Tax Act, any buyer purchasing a property for ₹50 Lakhs or more must deduct **1% TDS** from the payment made to you (the seller/builder) and deposit it with the government on Form 26QB. This applies to each installment where the running total crosses ₹50L. Buyers must give you TDS certificates (Form 16B). Your CA must account for this in project financials.

11

## Labour Law Compliance — BOCW, ESIC, PF

Labour department conducts surprise inspections on construction sites

STEP 11.1–11.4

### Mandatory Labour Registrations for Construction

- **BOCW Registration (Building & Other Construction Workers Act, 1996):** Register your project with the Maharashtra Building & Other Construction Workers Welfare Board. Pay BOCW Cess = 1% of total construction cost. This funds worker welfare — hospitals, insurance, children's education. Non-payment = government stops your construction and levies heavy penalty. Apply at: [bocwwb.maharashtra.gov.in](http://bocwwb.maharashtra.gov.in)
- **ESIC (Employees' State Insurance):** If you directly employ workers (not through contractor), ESIC registration required for employees earning below ₹21,000/month. Contractor's workers are contractor's obligation — but check your contract clause. ESIC contribution: Employer 3.25% + Employee 0.75% of wages. Register at: [esic.in](http://esic.in)
- **EPF (Employees' Provident Fund):** If you or your contractor employs 20+ workers, EPF registration mandatory. Employer contribution: 12% of basic wages. Contractor must show EPF compliance certificates monthly. Register at: [epfindia.gov.in](http://epfindia.gov.in)
- **Safety Officer:** For construction projects above a certain size (500+ workers), a qualified Safety Officer appointment is mandatory under The Building and Other Construction Workers (Regulation of Employment and Conditions of Service) Act. Maintain accident register, safety board on site.

**Practical Tip:** Use an experienced construction contractor who is already BOCW, ESIC, PF registered. Make their compliance certificates a payment release condition in your contract. This transfers the compliance burden to them and protects you.

12

## Bank Loan Approval for Your Project

Without project approval from banks, your buyers cannot get home loans

### STEP 12.1

#### How to Get Your Project Pre-Approved by Banks

Before launching sales, approach 3–4 banks for project pre-approval. Banks that routinely approve housing projects in Nashik: **SBI, Bank of Baroda, HDFC Ltd, Axis Bank, Saraswat Co-op Bank**. Once your project is approved, their branch staff actively refer buyers to your project (becomes a sales channel).

#### Documents required by banks for project approval:

- Building Plan Sanction from NMC
- MahaRERA registration certificate and RERA number
- Title search report (banks appoint their own empaneled lawyer — your title report should match)
- Promoter KYC (PAN, Aadhaar, ITR for 3 years, bank statements)
- Project details: number of units, carpet areas, prices, completion timeline
- CA-certified project cost estimate
- Model Agreement for Sale draft

Bank sends their empaneled lawyer for independent title verification. If clean title confirmed, bank issues an internal "project approval" and starts processing buyer home loan applications for your project.

13

## PMAY Subsidy Linkage for Buyers

This is a major buying incentive for your 2BHK buyers — use it in marketing

### STEP 13.1

#### Pradhan Mantri Awas Yojana (PMAY) — Credit Linked Subsidy Scheme

PMAY provides interest subsidy on home loans for first-time buyers. Your 2BHK buyers earning up to ₹12L per year qualify for subsidy. Eligibility and subsidy amount:

| Income Category | Annual Income | Loan Amount for Subsidy | Subsidy Rate          | Max Subsidy  |
|-----------------|---------------|-------------------------|-----------------------|--------------|
| EWS / LIG       | Up to ₹6L     | Up to ₹6L               | 6.5% interest subsidy | ~₹2.67 Lakhs |
| MIG-I           | ₹6L – ₹12L    | Up to ₹9L               | 4% interest subsidy   | ~₹2.35 Lakhs |

**How it works for your buyers:** Buyer applies for home loan at a PMAY-nodal bank (SBI, HDFC, etc.). Bank processes the loan and claims subsidy from NHB/HUDCO. Subsidy is credited to the buyer's loan account upfront — reducing the principal and thus the EMI. Buyer saves ₹2–2.67 Lakhs effectively.

**Your role:** Provide buyers with: RERA certificate, your project's title clearance, floor plan, carpet area certificate. Tie up with a DSA or bank officer who handles PMAY paperwork — this removes buyer friction and closes bookings faster.

14

## Co-operative Housing Society Formation

Mandatory within 4 months of majority of flats being sold — Maharashtra law

### STEP 14.1–14.5 — COMPLETE PROCESS

#### How to Form the Housing Society

Governed by: Maharashtra Co-operative Societies Act, 1960 and Rules 1961. Registering authority: District Deputy Registrar of Co-operative Societies, Nashik.

- Promoter's obligation:** Under Section 10 of MOFA 1963, the builder (promoter) must take steps to form a co-operative society of the flat purchasers within 4 months of majority of flats being sold. If builder delays, buyers can form it independently.
- Minimum requirements:** Minimum 10 members (or 60% of total flats, whichever is less) to form a society
- Preliminary meeting:** All flat purchasers meet, pass a resolution to form a society, choose a name ("Indraprastha Heights Co-operative Housing Society"), elect provisional committee (Chairman, Secretary, Treasurer)
- Documents for registration:**
  - Application Form A (prescribed under MCS Rules)
  - List of members with addresses and share amounts
  - Draft bye-laws in prescribed format (MCS model bye-laws 2013)
  - Minutes of preliminary meeting
  - No-objection from builder that the society is being formed
  - Proof of membership — registered agreement for sale of each member
  - Bank account opening proof (society's bank account)
  - Application fee: ₹500–2,500
- Registration:** District Deputy Registrar processes application, verifies documents, issues Registration Certificate. Society is now a legal entity. Issue share certificate (Form J) to each member: typically 5 shares at ₹50 each = ₹250 per flat.

15

## Conveyance of Land to Society

Transfer of land ownership from builder to society — often delayed by builders

### STEP 15.1–15.3

#### Conveyance Deed — What It Is and How to Execute It

After society is formed, the builder must execute a Conveyance Deed transferring the land and building to the society. This gives the society legal ownership of the property. Governed by MOFA Section 11.

- **Who executes:** Builder (promoter) as seller + Society (through its Secretary authorized by General Body resolution) as purchaser
- **Stamp duty on conveyance:** Varies — currently ₹100 fixed stamp duty if executed within the prescribed time limit under MOFA. Delayed conveyance attracts full stamp duty on market value.
- **Registration:** Conveyance deed must be registered at Sub-Registrar office
- **After conveyance:** Society's name appears in 7/12/Property Card as owner. Society can then mortgage, redevelop, or deal with the property independently.

**If Builder Refuses / Delays:** Society can apply for **Deemed Conveyance** under Section 11(3) of MCS Act. Apply to District Deputy Registrar who convenes a hearing and can order deemed conveyance. Process: 6–18 months. Increasingly common in Maharashtra — builders routinely delay conveyance to retain land control.

**Advice:** Execute conveyance promptly after society formation. Delays create legal complications, devalue the property in buyers' eyes, and can be used as grounds for complaints to MahaRERA.

16

## Master Timeline & Key Contacts

|             |                                                                                                                                                                                                            |
|-------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| WEEK 1–2    | Obtain 7/12, Property Card, Index II. Check NA status. Appoint advocate for title search. Appoint structural engineer. Order soil test.                                                                    |
| MONTH 1–2   | Title search completed. NA order filed (if needed). Soil test results received. Structural design starts. Guru Buildcon begins AutoDCR drawing preparation. All NOC applications submitted simultaneously. |
| MONTH 2–4   | NA order processing (if applicable). NOC collection in progress: chase Fire, AAI, MSEDCL, NMC Water, MPCB weekly. AutoDCR drawing finalization and internal review with architect.                         |
| MONTH 4–5   | AutoDCR submission to NMC with all NOCs and documents. Fee payment online. NMC scrutiny period begins. Respond to any auto-flags within AutoDCR system.                                                    |
| MONTH 5–7   | NMC objection response period. Revised drawings submitted if required. Building Plan Sanction received. Approach banks for project pre-approval.                                                           |
| MONTH 7–8   | MahaRERA registration application filed. Escrow account opened. CA certificates prepared. RERA number received. Marketing legally begins with RERA number on all materials.                                |
| MONTH 8–9   | Commencement Certificate applied for and received. BOCW registration done. Contractor appointed. GST registration for project. Construction begins.                                                        |
| MONTH 9–11  | Foundation work. Plinth NMC inspection. Plinth completion certificate. Site safety board installed. Workers registered under ESIC/EPF by contractor.                                                       |
| MONTH 11–30 | Floor by floor construction. Structural certificate each slab. Quarterly RERA updates. Lift shaft Inspector approval. Fire system installation. AFS registration with buyers as bookings come in.          |
| MONTH 30–33 | Construction complete. Fire final inspection. Lift final inspection. Rainwater harvesting and solar confirmed. OC application filed.                                                                       |
| MONTH 33–36 | NMC final OC inspection. Any deviation compounded. OC received. Final sale deeds registered with buyers. MSEDCL individual meters applied for.                                                             |
| POST OC     | Society formation (within 4 months of majority sold). Land conveyance to society. Property tax registration per flat. MahaRERA project closure filing. Maintenance transferred to society.                 |
